

1. Solve using substitution:

$$x - 2y = 0$$

$$2x - 5y = -4$$

Previous Answer: (12, 17)

2. Solve using substitution:

$$-0.5x - y = -3$$

$$x + 3y = 6$$

Previous Answer: (4, 1)

3. Solve using substitution:

$$y = 8 - x$$

$$4x - 3y = -3$$

Previous Answer: (2, 3)

4. Solve using substitution:

$$x = 8y$$

$$x - 4y = 12$$

Previous Answer: (6, 0)

5. Solve by graphing:

$$y = x + 5$$

$$y = 2x - 7$$

Previous Answer: (24, 3)

6. Solve using substitution:

$$-x + 2y = 4$$

$$5x - 3y = 1$$

Previous Answer: (2, 1)

7. Solve using substitution:

$$-3x - y = -13$$

$$x + 2y = 6$$

Previous Answer: (3, 5)

8. Solve using substitution:

$$4x - y = 7$$

$$5x - 8y = 2$$

Previous Answer: (8, 4)
